

Delivery Assessment Services

The Delivery Assessment includes a site visit by a Blu project manager, who will determine the following:

- 1.** Confirm which design will work best on your site.
- 2.** Evaluate solar orientation to determine optimum sun exposure.
- 3.** Assist in siting of the home, based on solar and wind exposure, and, of course, views.
- 4.** Orchestrate the logistics of delivering and setting your home, which will include careful consideration of the route leading to your property.
- 5.** Photographs will be taken of: approach to your site, building pad, staging area (if applicable), and any areas where additional preparation is needed, on or off-site (i.e. tree removal, grading, etc.).
- 6.** Normally, delivery assessments last about an hour, and a written report of our findings will be emailed to you in pdf format within one week after your site visit.
